

Appl. No. : 10/681,472
Filed : October 8, 2003

AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows. Additions are underlined; deletions are in ~~strikeout~~ text.

Please amend the paragraph beginning on page 7, line 15 as follows:

FIG. 1 shows a magnified side view of ~~the one~~ embodiment of the bag. This view shows the folds for a three-layered bag. This bag is made by means of a process that folds the material back onto itself twice. Said layers may be of any pliable material, including low or high density polypropylene, thermoplastic, fabric, nylon, paper, or laminated paper. The top of the bag is formed by the middle, or second, layer (10) and the bottom is formed by the bottom-most, or first, layer (11). Items to be stored or transported would be inserted into the opening (12) between the middle and the bottom-most layer (11). The bottom-most layer may extend beyond the fold for the middle and top-most, or third, layer, allowing the bottom-most layer to have a flap (13) that can be used to close the bag.
